

# FIPS 140-2 Validation Certificate

The National Institute of Standards  
and Technology of the United States  
of America

TM

The Communications Security  
Establishment of the Government  
of Canada

Certificate No. 599

The National Institute of Standards and Technology, as the United States FIPS 140-2 Cryptographic Module Validation Authority; and the Communications Security Establishment, as the Canadian FIPS 140-2 Cryptographic Module Validation Authority; hereby validate the FIPS 140-2 testing results of the Cryptographic Module identified as:

**BorderGuard 5000 by Blue Ridge Networks, Inc.**  
(When operated in FIPS mode)

in accordance with the Derived Test Requirements for FIPS 140-2, Security Requirements for Cryptographic Modules. FIPS 140-2 specifies the security requirements that are to be satisfied by a cryptographic module utilized within a security system protecting *Sensitive Information* (United States) or *Protected Information* (Canada) within computer and telecommunications systems (including voice systems).

Products which use the above identified cryptographic module may be labeled as complying with the requirements of FIPS 140-2 so long as the product, throughout its life cycle, continues to use the validated version of the cryptographic module as specified in this certificate. The validation report contains additional details concerning test results. No reliability test has been performed and no warranty of the products by both agencies is either expressed or implied.

This certificate includes details on the scope of conformance and validation authority signatures on the reverse.

FIPS 140-2 provides four increasing, qualitative levels of security: Level 1, Level 2, Level 3, and Level 4. These levels are intended to cover the wide range and potential applications and environments in which cryptographic modules may be employed. The security requirements cover eleven areas related to the secure design and implementation of a cryptographic module. The scope of conformance achieved by the cryptographic modules as tested in the product identified as:

**BorderGuard 5000 by Blue Ridge Networks, Inc.**  
*(Hardware Versions: BorderGuard 5100, 5200, 5400, 5500 and 5600; Firmware Version: DPF1 V7.1; Hardware)*

and tested by the Cryptographic Module Testing accredited laboratory: COACT Cafe Lab, NVLAP Lab Code 200416-0  
CRYPTIK Version 6.0

is as follows:

<i>Cryptographic Module Specification:</i>	Level 2	<i>Cryptographic Module Ports and Interfaces:</i>	Level 2
<i>Roles, Services, and Authentication:</i>	Level 2	<i>Finite State Model:</i>	Level 2
<i>Physical Security:</i> <i>(Multi-Chip Standalone)</i>	Level 2	<i>Cryptographic Key Management:</i>	Level 2
<i>EMI/EMC:</i>	Level 2	<i>Self-Tests:</i>	Level 2
<i>Design Assurance:</i>	Level 2	<i>Mitigation of Other Attacks:</i>	Level 2
<i>Operational Environment:</i>	Level N/A	<i>tested in the following configuration(s):</i>	N/A

The following FIPS approved Cryptographic Algorithms are used: **AES (Certs. #173 and #116); Triple-DES (Certs. #275 and #57); DES (transitional phase only – valid until May 19, 2007; Certs. #271 and #119); SHS (Certs. #258 and #49); HMAC (Certs. #21 and #22); DES MAC (transitional phase only – valid until May 19, 2007; Cert. #119; vendor affirmed)**

The cryptographic module also contains the following non-FIPS approved algorithms: **IDEA; HMAC-MD5; MD5; RSA (non-compliant); RSA BSAFE Crypto-C RNG; HiFn 7855 RNG; Diffie-Hellman (key agreement; key establishment methodology provides between 56, bits and 112 bits of encryption strength for Models 5100, 5200 and 5400; and between 56 bits and 150 bits of encryption strength for Models 5500 and 5600)**

**Overall Level Achieved: 2**
